

DRAKE SPECIALTIES

PENETRATION SEALS

- Penetration Seals are interlocked rubber links that are designed to provide a leak-proof and insulated seal that fills the annular space of pipe penetrations.
- Penetration Seals fit around piping going through walls, floors, tanks, manholes, vaults, dikes, and pipeline casings to provide a gas and watertight seal.
- Penetration Seals have been tested to withstand a hydrostatic seal up to 20 psig and up to 40 feet of head pressure.

- Standard material is EPDM rubber, suitable for 250°F.
- Standard hardware is plated carbon steel.
- Economical, reusable, and simple to install.
- Available in 12 different sizes to fit nearly every pipe penetration, from 1/2" pipe to 98" pipe.
- Nitrile rubber available for services of solvents, hydrocarbons, oil, gas, and jet fuel, suitable for 210°F.
- Silicone rubber available for high temperature applications up to 400°F.
- Optional stainless steel hardware available.
